DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-2, drawn to a method for production of multiple Class I HLA antigens comprising applying a PCR reaction to a mammalian DNA specimen and blunt end cloning the PCR product, classified in class 435, subclass 69.3.
 - II. Claim 3, drawn to a method for production of multiple Class I HLA antigens comprising applying a PCR reaction to a mammalian DNA specimen and cloning the PCR product that has a tail, classified in class 435, subclass 69.3.
 - III. Claim 4, drawn to a method for production of multiple Class I HLA antigens comprising isolating RNA, synthesizing the first strand of cDNA, and applying a PCR reaction to the cDNA and cloning the PCR product that has a tail, classified in class 435, subclass 69.3.

The inventions are distinct, each from the other because of the following reasons:

Groups I-III are unique methods. They differ with respect to their ingredients and process steps. Group I encompasses blunt end cloning, Group II encompasses cloning with overhanging tails, and Group III encompasses cloning from RNA using reverse transcriptase and making cDNA. Therefore, Groups I, II and III are patentably distinct, each from the other.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, and because a search in the non-patent literature of any of these distinct inventions would not be co-extensive with a search of the others, an examination and search of two or more inventions in a single application would constitute a serious undue burden on the Examiner, restriction for examination purposes as indicated is proper.

2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
